

Ignite Your Business

Professional Training Available Exclusively For Bosch Network Repair Shops!

Course Description: **Electrical – Part 1**

Who should attend: Any level technician or owner/technician.

Why it's important: All modern vehicles run on electronic systems – and technicians with fundamental electrical knowledge have an advantage when diagnosing and repairing these vehicles.

Description: This two-day course provides an understanding of the concept of electricity, Ohm's Law and other electrical equations. Students are introduced to electrical test equipment, electrical circuit components and different types of circuits (series, parallel and series-parallel).

How To Register:

Bosch Module shop owners/managers can register their technicians and/or themselves at:

- ▶ www.BoschAutoParts.com/Module-Program#training – simply submit an online form to receive a call back from a Bosch training specialist
- ▶ Or call **866-716-4204**

Seats are limited, so sign up today!*

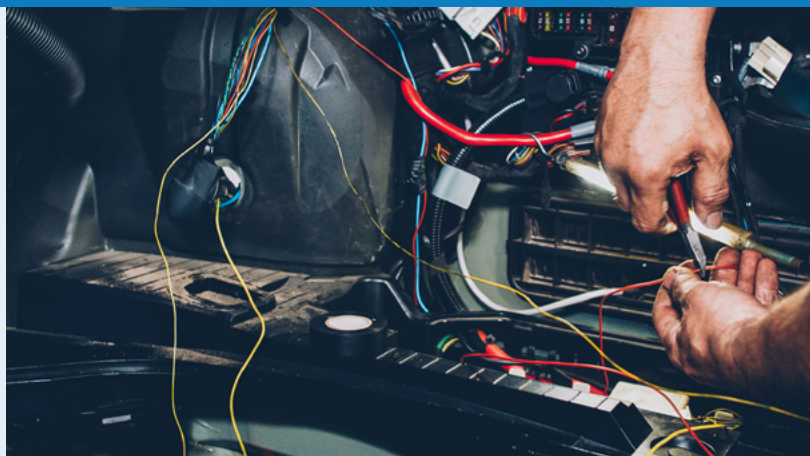

*Attendees may not be accepted if course reaches capacity. Refunds will be issued for courses that are canceled due to low enrollment.

Course Description: **Understanding Aftermarket OEM Wiring Diagrams & CAN Systems**

Who should attend: Junior- and mid-level technicians who have begun the vehicle diagnostics journey.

Why it's important: Modern vehicles aren't just mechanical anymore – so today's technicians need the expertise of working on complex electronic systems.

Description: This course provides technicians with a fundamental understanding of both wiring diagrams and the Controller Area Network (CAN) communication standard for vehicle intercommunication. Attendees learn the most common formats, symbols, navigation and sections of wiring diagrams for fast and effective usage of wiring diagrams in any format. CAN Systems are also covered, focusing on communications between today's complex electronic systems to provide efficient vehicle operation – critical information for diagnosing today's vehicles.

How To Register:

Bosch Module shop owners/managers can register their technicians and/or themselves at:

- ▶ www.BoschAutoParts.com/Module-Program#training – simply submit an online form to receive a call back from a Bosch training specialist
- ▶ Or call **866-716-4204**

Professional Training Available Exclusively For Bosch Network Repair Shops!

Course Description: **ADAS System Diagnosis & Calibration**

Who should attend: Owners, managers and technicians looking for a detailed introduction to Advanced Driver Assistance Systems (ADAS) technologies and service.

Why it's important: The vast majority of today's production vehicles are equipped with some form of ADAS technology – which means that repair shops will soon see these vehicles for repair and calibration services.

Description: Nowadays, most vehicles come standard with some type of collision avoidance, self-parking systems or ADAS. This course provides a basic understanding of ADAS components used in system operations. Attendees will learn how component configurations are unique to each manufacturer, with additional discussion regarding calibration processes, tools and equipment.

How To Register:

Bosch Module shop owners/managers can register their technicians and/or themselves at:

- ▶ www.BoschAutoParts.com/Module-Program#training – simply submit an online form to receive a call back from a Bosch training specialist
- ▶ Or call **866-716-4204**

Automotive

▶ Service & Maintenance

Course Description: *Deductive Reasoning with Diagnostic Strategies*

Who should attend: Junior- and mid-level technicians who are ready to start the vehicle diagnostics journey.

Why it's important: Modern vehicles are becoming more complex – which means today's technicians need a solid framework for diagnosing those vehicles.

Description: This topic provides technicians with the knowledge to implement diagnostic strategies required to efficiently service today's vehicles. Because vehicles have become increasingly sophisticated, accurate and efficient, diagnostics are critical components to increase customer satisfaction. This training equips students with the information needed to navigate a repeatable, effective strategy for all diagnostic situations.

How To Register:

Bosch Module shop owners/managers can register their technicians and/or themselves at:

- ▶ www.BoschAutoParts.com/Module-Program#training – simply submit an online form to receive a call back from a Bosch training specialist
- ▶ Or call **866-716-4204**

Professional Training Available Exclusively For Bosch Network Repair Shops!

Course Description: **Electric- and Hybrid-Vehicle Overview**

Who should attend: Owners, managers and technicians looking for a detailed introduction to electric and hybrid vehicle technologies and service.

Why it's important: The number of electric and hybrid vehicles is quickly growing – which means repair shops will soon see these vehicles in for service.

Description: This course offers attendees an introduction and overview to Battery Electric Vehicle (BEV) and Hybrid Electric Vehicle (HEV) Service Strategies – and explains how these increasingly popular vehicles operate. Students gain knowledge of the components, operating strategy and unique powertrain configurations – in addition to identifying the components and understanding the safe practices required to service these types of vehicles.

How To Register:

Bosch Module shop owners/managers can register their technicians and/or themselves at:

Professional Training Available Exclusively For Bosch Network Repair Shops!

Course Description: **Passenger Vehicles & Light-Duty Truck Diesel EGT**

Who should attend: All entry-level and experienced diesel technicians seeking to work or working on passenger and light-duty diesel vehicles.

Why it's important: Passenger and light-duty diesel vehicles reached their highest sales levels in recent years. Modern shops need diesel vehicle expertise to meet the growing demand to service these vehicles.

Description: To reduce harmful diesel emissions output, vehicle manufacturers utilize complex EGT systems that are an integral part of today's common rail diesel vehicles. This course provides an overview of diesel Exhaust Gas Aftertreatment (EGT) systems on passenger vehicles and light-duty trucks. Understanding how to diagnose and service these emission control systems is critical for optimal vehicle operation and longevity of these expensive EGT components. Students learn key details about diagnosing passenger car and light truck diesel aftertreatment and Bosch 3.1 & 5.x Denoxtronic systems.

How To Register:

Bosch Module shop owners/managers can register their technicians and/or themselves at:
