## Windshield Wiper Program

Driving in the rain can be stressful, especially at night. **The Bosch ENVISION™ windshield wiper blade sharpens night visibility and offers extreme weather safety.**

- 1 NightBlack™ spoiler** combines a light absorbing charcoal powder and water repelling polymer compound.
  - ▶ Reduces glare from reflective lights for enhanced visibility
  - ▶ Repels water droplets and minimizes ice buildup for extreme all weather wiping performance
- 2 NightFocus™ technology** fuses base connector and blade, forming a single core construction.
  - ▶ Provides uniform wiping stability across the entire length of the blade to reduce blur for sharpened night visibility.
- 3 ClearMax 365™ rubber technology** features a flexible dual synthetic rubber blend and a precision cut polymer edge.
  - ▶ Creates an optimal wipe angle to minimize glare for safer driving
  - ▶ Protects the wiping edge from ozone deterioration, extreme weather and road debris for longer life
- 4** When the **SafeCheck indicator** turns yellow it's time to check your blades for safer driving in rain, sleet or snow.

Includes adaptors for the following connection types

Hook 9x3mm 	Hook 9x4mm 	Side Lock 	Side Lock Narrow 
Top Lock Large 19mm 	Top Lock Narrow 16mm 	Pinch Tab 	Top Lock (Denso) 

Driving in the rain can be stressful, especially at night. **The new Bosch ENVISION™ windshield wiper blade sharpens night visibility and offers extreme weather safety.**

Do not let your customers' sacrifice their driving by dealing with **blur** and **glare**, which might be experienced with other windshield wiper blades. Recommend Bosch ENVISION™ to help reduce these problems.

**Blur** occurs when windshield wiper blades do not effectively wipe away enough water on the windshield leaving uneven water patches. When light from oncoming traffic or streetlights pass through the remaining water, drivers' will experience blur, which can compromise vision. **NightFocus™** technology provides an even wipe across the entire length of the windshield wiper blade ensuring it will wipe away rain and reduce blur from light sources.

**Glare** occurs when the wiping edge does not precisely meet the windshield during use, leaving behind too much water. When brake lights and traffic lights contact excessive residual water, drivers' will encounter glare, impairing visibility. Many windshield wiper blades and water repellents feature special coatings that fade over time or leave behind particles also enhancing glare. **ClearMax 365™** features a permanent polymer coating and precision cut edge providing the optimal wipe angle to remove rain, reduce particles on the windshield, and alleviate glare.
