

Invented for life

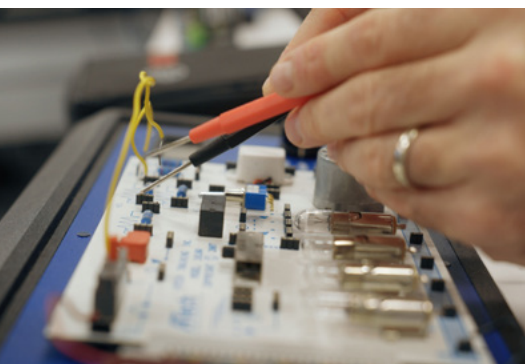

Ignite Your Business

Professional Training Available Exclusively For Bosch Network Repair Shops!

Course Description: **Electrical for Tech's: Concepts & Circuit Work**

Who should attend: Any level technician or owner/technician.

Why it's important: All modern vehicles run on electronic systems – and technicians with fundamental electrical knowledge have an advantage when diagnosing and repairing these vehicles.

Description: This two-day course provides an understanding of the concept of electricity, Ohm's Law and other electrical equations. Students are introduced to electrical test equipment, electrical circuit components and different types of circuits (series, parallel and series-parallel).

Details:

2-Day Course! March 13-14, 2023 8:00 am - 5:00 pm EST

- ▶ Light breakfast / full lunch provided both days
- ▶ Location: Courtyard Portland Airport, 11550 NE Airport Way, Portland, OR 97720

► Service & Maintenance

Course Description: **Understanding Aftermarket OEM Wiring Diagrams & CAN Systems**

Who should attend: Junior- and mid-level technicians who have begun the vehicle diagnostics journey.

Why it's important: Modern vehicles aren't just mechanical anymore – so today's technicians need the expertise of working on complex electronic systems.

Description: This course provides technicians with a fundamental understanding of both wiring diagrams and the Controller Area Network (CAN) communication standard for vehicle intercommunication. Attendees learn the most common formats, symbols, navigation and sections of wiring diagrams for fast and effective usage of wiring diagrams in any format. CAN Systems are also covered, focusing on communications between today's complex electronic systems to provide efficient vehicle operation – critical information for diagnosing today's vehicles.

► Service & Maintenance

Course Description: **Electric- and Hybrid-Vehicle Overview**

Who should attend: Owners, managers and technicians looking for a detailed introduction to electric and hybrid vehicle technologies and service.

Why it's important: The number of electric and hybrid vehicles is quickly growing – which means repair shops will soon see these vehicles in for service.

Description: This course offers attendees an introduction and overview to Battery Electric Vehicle (BEV) and Hybrid Electric Vehicle (HEV) Service Strategies – and explains how these increasingly popular vehicles operate. Students gain knowledge of the components, operating strategy and unique powertrain configurations – in addition to identifying the components and understanding the safe practices required to service these types of vehicles.
